Parking.Logic V15.08

Perfect parking
space management

With Parking.Logic you get a comprehensive solution that goes far beyond a classic parking system. Give your parking business a 360° perspective!

Powerful

The entire experience of the parking industry is combined in one parking space management system. Benefit from the innovative and constant further development and use the new functions in all system areas.

Open

Comprehensive interfaces ensure independence and investment security and enable the development of new business segments. With Parking.Logic, you are open to any integration: from parking guidance systems, readers and ERP systems to public transport areas.

Flexible

Thanks to a wide range of software option modules and comprehensive setting options, Parking.Logic can be flexibly adapted to almost any customer requirement. This makes your operation scalable from simple company parking spaces to complex, networked city parking solutions.

Mobile

Ticket issuing, cash register function, payment and exit function in one app: The Mobile.Gate 'Parking' app, which can be integrated into Parking.Logic, enables you to manage your parking space even more flexibly.

Features

- Multi-functional Manual Pay Station for processing & payment of parking tickets and managing sales at your car park.
- Control Center – easy monitoring and control of all devices throughout the parking facility, from entrance and exit columns to automatic payment machines or EV charging devices. Pulse Intercom Software available as an optional extension.
- Administration and configuration – from defining sales articles and managing rates to administering customer details and configuring devices. Includes all programs required for administration and maintenance of the entire parking facility.
- Reporting and statistics – flexible financial and operative reports and statistics let you keep track of all the relevant facts and figures at all times.
- Flexibly extensible software functions – more than 40 software modules available for enhancing basic system functionality. Reservation of parking spaces, integration of available data carriers, use of mobile devices or integrated EV charging devices, on-device advertising options, active support of customer loyalty programs or smartphone e-tickets: These are just a few of the options from the large offer of SKIDATA Parking.Logic software modules and licenses.
- Interfaces allow for a flexible, individual extension of various parts of the SKIDATA parking system. Integration of license plate recognition systems, parking guidance systems or additional hardware such as hands-free ticket reading devices.
- Remote access – various options for remote system access allow full control of the entire SKIDATA parking system from anywhere at any time.
- Security – Parking.Logic is validated in accordance with the latest international guidelines for credit card processing systems (PCI/PA-DSS). This ensures that the parking system software complies with the latest security requirements, and that the SKIDATA software development and maintenance processes are subject to continuous security testing.
- Pre-payment at entrance/ Event Parking – customers can pay the rate directly at the entrance lane and leave the car park after an event conveniently without payment – no more queuing at payment machines or cashier stations.
- Operative Dashboards – Business overview at a glance. View different actual data in the browser window to manage your car park as efficiently as possible.
- Automatic download and installation of service pack software and hotfixes from central SKIDATA server. Use state-of-the-art technology for security updates and bug fixes. The newest service packs and hotfixes can be automatically downloaded and installed in the parking facility.
- Improved revenue protection with license plate-based anti-circulation control
